

Savaria® Luma

Our most discreet through-floor lift

Easy to install in your home, the Luma lift helps you travel between two floors without the stress of the stairs. Finely finished with a luxury feel and panoramic views, the Luma is packed full of safety features and is battery powered. It charges when not in use so you can *always* rely on it.

Blends into your décor

Designed for simplicity and to slot neatly into your home, the Luma's compact footprint means it can tuck into a corner or, due to its self-supporting structure, can be placed virtually anywhere in the room. The fully enclosed lift has a luxury and spacious feel thanks to its crystal-clear acrylic panels, elegant hidden lighting and neutral white finish. All cables and cords are hidden too.

Always ready to go

Thanks to its battery operation, the Luma is inexpensive to run and will always be ready to go - even if you have a power cut. It charges via standard household power - like a typical household appliance - when not in use, so you never need to worry. It can even travel both up and down for as many as five trips during an outage.

Stress-free installation

The Luma's modern simple design means minimal work is needed in your home to install the lift, making the experience as stress-free as possible. The self-supporting dual rail system means preparation generally requires a simple square floor cut-out and floor bracing. The whole process can be completed in just one or two days leaving you to go about daily life with little disruption.

Whisper-quiet

Not only does the Luma offer a super-smooth and comfortable ride thanks to its soft start and stop technology but it is whisper-quiet due to its in-built quiet-drive system.

Safe travels

The Luma is designed for you to travel safely with ultimate peace of mind. From One Touch Alert two-way voice communication so you can call someone from the lift if needed, to an emergency stop button and sensor system that stops the lift should it meet any obstruction, the Luma also has large backlit buttons and a stylish non-skid floor.

Entry is easy with a full-sized door and sloped low-level access, avoiding trip hazards. An optional second door can be added to provide straight-through access to accommodate your home's floorplan.

Two handy remote controls are provided so you can call the lift up or down anytime.
